

BLUE GRAMA

BOUTELOUA GRACILIS

IDENTIFICATION - Also known as "eyebrow grass," due to the look of its brushlike seed heads. This is an important short grass species that can be found throughout the mixed prairies of the Great Plains and Southwest.

BENEFITS - Blue Grama is an important food source to foraging wildlife including deer, pronghorn and elk.

FUN FACTS - This is Colorado's state grass. These are a great low-water species to try in your landscape. Blue grama turns tan when dormant, adding winter interest to your yard.
